EDUCATION

University of Rochester, Simon Business School

Rochester, New York

Master of Business Administration (STEM) – Strategy & Technology

May 2026

- Merit Scholarship Recipient, Beta Gamma Sigma Honoree, GPA: 3.76/4.0
- Leadership: Data Analytics Club - VP of Marketing, Net Impact Club - VP of Finance

Indian Institute of Space Science and Technology

Kerala, India

Bachelor of Technology - Physical Sciences (Earth System and Atmosphere Sciences)

May 2017

- Department of Space Merit Scholarship Recipient, GPA: 7.62/10

PROFESSIONAL EXPERIENCE

Edge Energy – A Clean Energy Solutions company supporting decarbonization in residential housing

Rochester, New York

Strategy & Business Planning Associate

Sep 2025 - Apr 2026

- Built a 5-year operating and financial model across 80+ HPXML categories, translating homeowner, contractor, sponsor, and energy data into KPI logic, scenario outputs, and launch scale-up assumptions from 200 to 900 homes annually.
- Designed a product performance and reporting framework across 9 ESG, energy, and engagement metrics, converting fragmented home-upgrade data into executive-ready dashboards, partner materials, and decision-support outputs.
- Developed a partner readiness and commercialization roadmap across 103 organizations, evaluating strategic fit, operating value, and deployment readiness to identify 30 priority targets for pilot execution.

Indian Space Research Organisation – India's National Space Agency

Gadanki, India

Program Manager – Weather Data and Monitoring Program

Jul 2021 - Jun 2024

- Owned end-to-end adoption of an AI-enabled storm nowcasting program for launch and disaster-response operations, conducting 4 formal readiness reviews with launch directors and mitigating up to \$400K in weather-related retesting exposure per launch.
- Directed cross-functional delivery across 7 stakeholder groups, including scientists, ML developers, IT teams, vendors, field teams, leadership, and operational users, aligning data reliability, model credibility, and workflow adoption for high-stakes decisions.
- Operationalized a multi-source weather intelligence pipeline across receivers, satellite, radar, and meteorological datasets, standardizing training, validation, and QA inputs for AI nowcasting with 97.5% accuracy and 5% false-alarm rate.
- Developed short-lead Integrated Water Vapor prediction models using 6+ atmospheric predictor groups, extending warning lead time 7x from 15 minutes to 2 hours for extreme-rainfall and launch-weather workflows.
- Presented national weather intelligence program strategy to 50 senior government stakeholders, converting complex performance insights into executive-ready updates that secured \$1M in expanded monitoring infrastructure funding.

Project Manager – GPS Network Project

Aug 2017 - Jun 2021

- Directed a \$1M national GNSS data-infrastructure program with a 20-member cross-functional team, piloting 7 receivers before scaling to 25 real-time stations across Southeast India, delivering 10% under budget with zero data loss.
- Managed launch execution for a 25-station sensing network, including site readiness, vendor coordination, installation, connectivity, QA, 3-source validation, and onboarding a replacement supplier within 30 days.
- Engineered Python, SQL, Pandas, and Xarray ETL workflows for real-time GNSS water-vapor ingestion, processing, QA/QC, archival, and access, improving processing speed by 50% for downstream ML forecasting systems.
- Led root-cause analysis of transmission failures affecting 50% of real-time observations and implemented corrective actions across local backup, store-and-forward recovery, VPN transfer, and gap monitoring, reducing data gaps to 2%.
- Owned RFQ, vendor evaluation, and procurement strategy across 20+ suppliers, implementing KPI-driven assessments and competitive bidding to reduce CAPEX by 11% while strengthening long-term operational continuity.

PROJECTS

- **Nora AI Assistant:** Designed a RAG-based workflow assistant using LangChain to retrieve source-backed content, flag weak evidence, and convert fragmented internal knowledge into review-ready responses for stakeholder decision-making.
- **Thermo Fisher Scientific:** Architected a tiered subscription and support model across licensing and service workflows, establishing a scalable revenue framework projected to lift CLV by 35% and add \$14M in recurring revenue.
- **MentorX:** Mapped APAC GTM and partner-acquisition strategy by analyzing 10+ competitors and KPI benchmarks across 30 targets, driving 40% B2B engagement growth and 30% pipeline expansion.

ADDITIONAL INFORMATION

- **Technology:** SQL, Python, Pandas, Xarray, Tableau, Power BI, Google Sheets, MS Project, Figma, ArcGIS, MATLAB, Machine Learning
- **Skills:** Program Management, Product Launch Readiness, End-to-End Delivery, Cross-Functional Execution, KPI Reporting, Risk Mitigation, Process Improvement, Stakeholder Management, Executive Communication, Vendor Management, Operational Readiness
- **Publications:** 3 IEEE publications on machine learning applications for atmospheric modeling and storm prediction
- **Interests:** A sports enthusiast with a huge love for soccer, cricket and table tennis; Sci-fi enthusiast
